INTRODUCTION

Welcome to the UNIVE white paper and thank you for taking the time to take an interest in the project, we are sure you will not regret it.

Here we will try to describe the UNIVE concept in a simplistic way but also sufficiently complete for the purpose of transparency but also to image this beautiful concept as best as possible.

We have observed and followed a lot of crypto projects for several years and we have found that the truly innovative projects that make the world of cryptocurrency grow are unfortunately relatively rare.

We therefore wanted to offer something unique and original but which brings something new for all crypto currency enthusiasts.

We believe and know that crypto currency will become essential and indispensable in the near future and we want to help make it better by offering the possibility for everyone to participate in this revolution with us.

GENERAL CONCEPT

If you imagined that every large cryptocurrency is a planet, and now imagine that UNIVE X is the universe in which its planets orbit.

UNIVE generates passive income in BTC, ETH, BNB, USDT, XRP, ADA, DOT, DOGE, MATIC and AVAX.

All you need to do is hold UNIVE and choose the currency you want to cash out.

How does this finance the project?

Each purchase and sale of tokens is subject to a tax which is divided into 3 parts.

- The most important part is distributed for the regulators of UNIVE so that they perceive their passive income.
- A second is reinjected into the liquidity pool to strengthen it and make it ever more solid, but this tax also has the effect of absorbing the burnt tokens.

And the last is burned in order to gradually reduce the total supply and increase the value of the token gradually.

To be precise on taxes and distribution.

10% tax for purchases.

Breakdown: 5% for holders, 3% for liquidity and 2% burnt.

15% for sales.

Breakdown: 10% for holders, 3% for liquidity and 2% burnt.

No tax for the transfer of UNIVE tokens between wallets to promote internal exchanges.

No tax to directly finance the development, the marketing or the team, a small part of the total supply is blocked to self-finance its aspects, which allows the holders to be given priority for the rewards but the details of the distribution of the supply is detailed below.

How to collect your rewards?

It is extremely simple thanks to the application.

1 / Connect your wallet.

2 / choose the blockchain. (ETH or BSC)

3 / Choose in which crypto currency you want to be rewarded.

4 / Give the address of the wallet on which you want to receive your tokens.

How does the system work?

The smart contract records the addresses of each holder and their number of tokens in order to fairly distribute the rewards levied on the purchase and sales tax.

The more UNIVE tokens you hold, the higher your reward proportion.

For each purchase / sale the UNIVE tokens intended for rewards are sent to the application and distributed proportionally, then the application works that way.

For rewards on the BSC blockchain, the conversion system is as follows for each withdrawal.

UNIVE-> BNB-> ETH

UNIVE-> BNB-> USDT

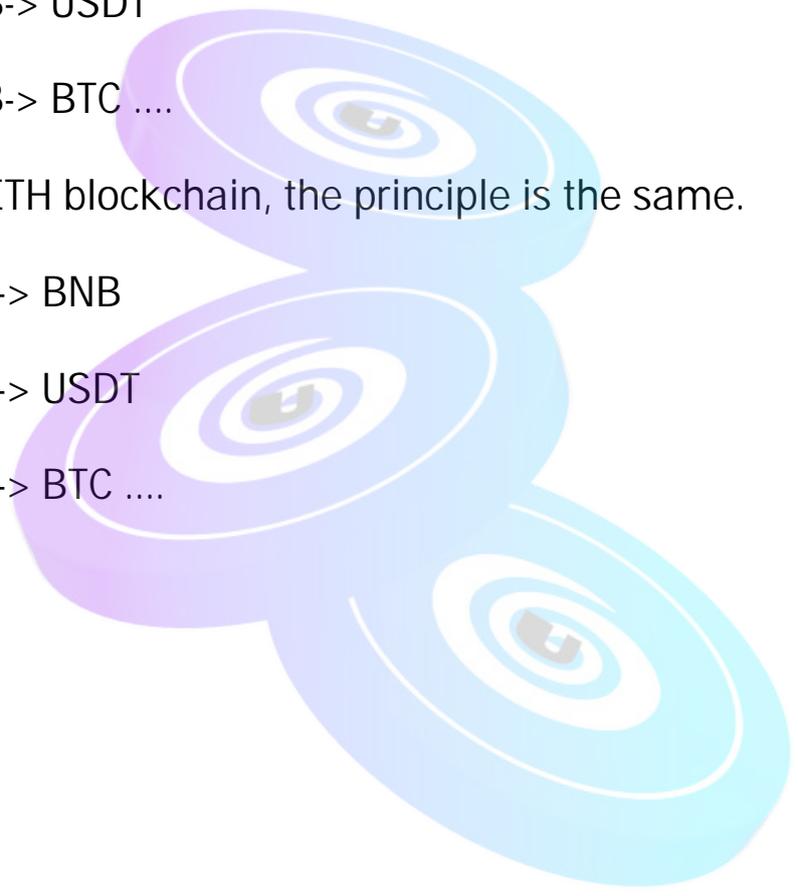

UNIVE-> BNB-> BTC

And for the ETH blockchain, the principle is the same.

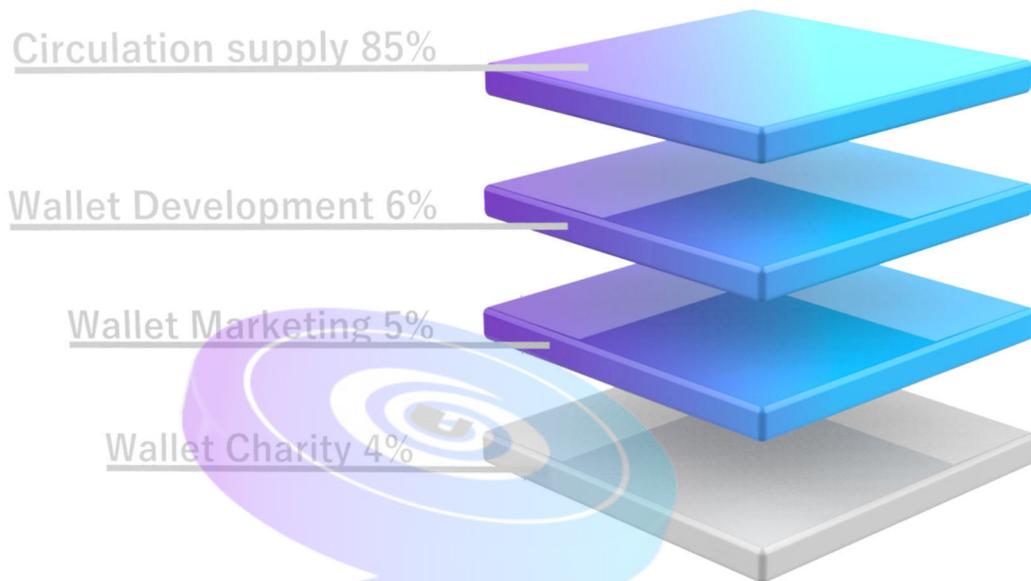

UNIVE-> ETH-> BNB

UNIVE-> ETH-> USDT

UNIVE-> ETH-> BTC

BREAKDOWN OF THE SUPPLY

- ➔ Initial burn of 10% of the total supply.
- ➔ 2% of each transaction burned.
- ➔ Final Supply: 100 million.
- ➔ Wallet development: 6% of the supply.
- ➔ Marketing wallet: 5% of the supply.
- ➔ Charity wallet: 4% of the supply.
- ➔ A total of 11% of the total supply is locked in for the long-term self-funding of UNIVE X with the rewards.

PROTOCOL

UNIVE X is deployed on 2 blockchains.

The Binance smart chain and the Ethereum blockchain.

We are not going to detail here the characteristics in detail of its 2 blockchains because everyone knows them well and they are currently essential in the world of crypto currencies.

We made this choice to make UNIVE X flexible and make it accessible to as many users as possible.

UNIVE X could eventually evolve and be deployed on other blockchains as well if this seems positive for users to make the decision.

To make UNIVE X even more flexible, it is possible with the application to exchange its UNIVE X tokens which are on the BSC for tokens which are on the ETH blockchain.

The handling is simple, instant and we do not take any costs.

Let's be specific:

Total initial supply: 1 billion tokens

500 million on BSC and 500 million on ETH

Burn Initial 10% (100 million) of the total supply: (1 month after the opening of sales.)

50 million BSC and 50 million ETH.

Burn 2% per transaction.

Final supply: 100 million tokens

50 million on BSC and 50 million on ETH.

There will be no creation of Tokens.

NFT's

UUNIVE X wants to offer a complete ecosystem and we want the NFT's to be part of this ecosystem.

2 Collections are currently in development.

- 1 collection collection in limited series.

NFT's from this collection will be auctioned.

- 1 collection of avatars to consider that each owner of an NFT UNIVE X then put it on their different profiles, social networks..

We are always concerned about the quality that we offer our community so each NFT will of course be unique but they will also all be animated with a studied and worked design.

We prefer quality over quantity and we want NFT's UNIVE to be a privilege for those lucky enough to own them.

CHARITY

UNIVE has blocked 4% of the total supply of its tokens on a wallet dedicated to good works.

The 4% of tokens will generate passive income with each purchase / sale of tokens.

It is important to specify that the money will not be given directly to charities because we want to know and see precisely how the money will be spent.

Each year a vote will be opened and UNIVE owners will vote for choose the different projects and countries that will receive.

Several choices will be offered:

- Food distribution, Help for sick children, Health center, School, Well for the distribution of drinking water ...

When the votes are over and the budget is established for the cause, volunteers from the UNIVE community will go to the countries concerned and take care of the work.

Videos will be produced and posted on social networks so that the whole the community can see how the money was donated and anyone can feel the satisfaction of having helped those who really need it.

UNIVE belongs to the community and all important decisions could be votable.

SECURITY

Here are 3 important points to talk about.

Unfortunately a lot of projects are not honest, have a time limit and communities lose all of their money.

UNIVE X believes that transparency and security are the basis of a good project and this is the reason why we want to clarify three things.

1 / The source code of UNIVE X has been audited by InterFi Network and obtained the maximum score of 100/100.

UNIVE X is therefore functional and reliable, a lot of development work has been done to avoid any risk.

Function problem, bug, security breach ...

2 / A KYC has also been done by InterFi Network and the owner of the project has given all guarantees so that investors are safe from fraud or theft.

(The name and photo of the team are also public on the first page of the site.)

3 / The liquidity is locked until the deployment of the UNIVE blockchain, at this time, it will be transferred.

All reports links are on the site.

EVOLUTION

UNIVE wishes to evolve and develop to offer a truly unique offer and an efficient and complete ecosystem to its users.

The UNIVE foundation will open its doors at the end of 2022.

The major objectives are the development of the team whose main mission will be to develop a blockchain that will make UNIVE X completely autonomous.

The blockchain will be innovative and will have the main mission will be to be the first that is completely ecological and decentralized.

Each actor will have to fulfill a strict cost statement regarding how he consumes his energy and everyone will be rewarded for it.

The second objective will be to streamline the process to allow everyone to have a reliable, fast and inexpensive ecosystem to democratize it in the world of digital payment.

There are currently taxes on purchases and taxes on sales, which allows the project to be self-financing in the long term and it allows the community to easily generate passive income but we have voluntarily waived its fees for token transactions between different portfolios.

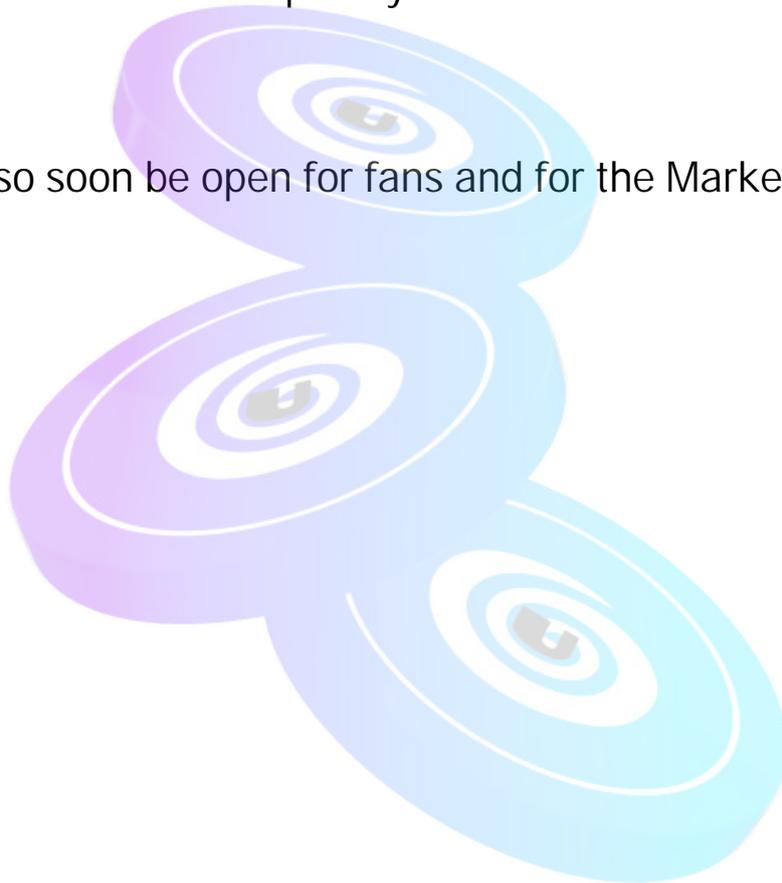

Why ? Allow a smooth and inexpensive circulation of the token as long as as it stays in the ecosystem, which is why buying and selling is taxed but not internal trade.

When UNIVE will be integrated with different payment systems, the payment costs will be ridiculous.

UNIVE X also wants to develop a wallet, a DEX.

Obective, make UNIVE X completely autonomous in all aspects for its users.

A shop will also soon be open for fans and for the Marketing aspect.

DISCLAIMER

The information provided on this site does not constitute investment advice, financial advice, business advice or any other kind of advice and you don't have to deal with any of the content as such.

UNIVE does not recommend that a cryptocurrency be bought, sold or owned by you. Do your own due diligence and consult your financial advisor before making any investment the decisions.

By buying, selling or otherwise interacting with UNIVE token, you free the UNIVE team, its affiliates and any other person involved in the project directly or indirectly from any and any liability.

By purchasing UNIVE, you agree not to purchase any security or investment and you agree to hold the team harmless and is not responsible for any losses or taxes you may incur.

You also agree that the team presents the token "as is" and is not obligated to provide any support or services. always do make sure you are in compliance with your local laws and regulations before making any purchase.
